Trustee Fee	Up to 0.05% p.a. of NAV
Initial Service Charge	Nil
Redemption Payment Period	Within 10 calendar days
Investment Manager	MIDF Amanah Asset Management Bhd

#### MANAGER'S COMMENTS

##### Review

The local government bonds/sukuku spread narrowed at the start of April but dealt firmer in later month on the back of strengthening ringgit. Gains were also on the back of lower US Treasury yields and broadly weaker US dollar after Trump's comment on low interest rate preference and strong US dollar. Ringgit strengthened against the US dollar by 1.9% in April from 4.4252 at end of March to 4.3390 as end of April 2017.

Also noted that market players were quite receptive of BNM's recent announcement on four-pronged measures 1) promote a fair and effective financial market, 2) improve liquidity in the bond market, 3) provide additional FX flexibility and 4) strengthen the financial market infrastructure. Specifically, under the second pronged to improve liquidity, the central bank's allowed wider but regulated short-selling of MGS to all resident entities compared to pre-existing framework that allows only licensed banks and investment banks. GII will also be eligible securities for short-selling, specifically to elevate liquidity in GII trading and narrow the gap against MGS.

These measures have helped infused positive sentiments, prompting renewed interest for MYR government bonds. Percentage of foreign holdings in MGS increased RM5.7 billion to 39.7% in April from 38.5% in March. Additionally, the recent rebound in MYR performance is expected to provide further catalyst for bargain hunting interests. On a positive note, the new 30-year GII issue received good demand with bid-to-cover ratio of 2.393 times, recording an average yield of 4.895%, higher than the expected yield range of 4.913% to 4.85%.

On monthly basis, the MGS yield curve trending lower by 5 to 32 bps across tenor. The 3-, 5-, 7-, 10- and 15-years closed at 3.21%, 3.68%, 3.90%, 4.05% and 4.46% respectively. Similarly, the government investment issues also traded lower by 6 to 16bps with the 3-, 5-, 7-, 10- and 15-years closed at 3.65%, 3.80%, 4.01%, 4.12% and 4.64% respectively.

#### Investment Outlook & Strategy

Bank Negara Malaysia expects the Malaysian economy to expand by 4.3% - 4.8% (2016 forecast: 4.0% - 5.0%) in 2017 in conjunction with its Annual Report 2016 release. Growth will be supported by sustained domestic demand and improvement in exports. On inflation outlook, the number has been revised higher to 3.0% - 4.0% against a backdrop of improving commodity and oil prices. Headline inflation

(1) MIDF Amanah Bond Fund has been converted to MIDF Amanah Money Market Fund on 1 January 2011.

The prospectus and application form can be obtained at our office. Units will only be issued upon receipt of an application form referred to in and accompanying the prospectus.

climbed to +5.1% y-o-y in March 2017 (+4.5% in Feb) led by cost-push factors (especially transport prices). Stable oil prices, a soft US dollar and a risk-off mode on geopolitical tensions in Syria and North Korea had supported inflow into this region. With markets continuing to price in Fed rate hike at 97% chance, appetite for local government bonds and sukuk is expected to remain healthy. The 10-year MGS benchmark has dipped below 4.00%, however the downside may be limited with expectation to hover around 3.85 - 3.90% unless MYR continues to strengthen substantially.

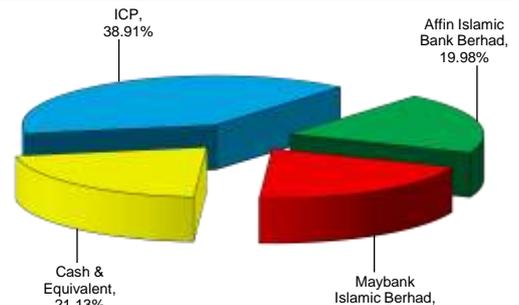

Foreign exposure into MGS has improved in April and we foresee outflow pressure may subside in 2Q17 as there is no maturity between April and August alongside with positive sentiment toward emerging market bonds. We think demand for government bonds is still healthy whilst appetite remains along the shorter end of the curve. Appetite for local corporate bonds has improved, as reflected by the second consecutive month of gains.

The Fund will continue investing in short term Islamic deposits.

#### LARGEST BANKS (as at May 31, 2017)
