Export was higher at 12.3% in Feb-14 (Jan-14: 12.2%) due to increased shipments of E&E products. Total import recorded 9.5% increase y-o-y in Feb-14 as compared to +7.2% in Jan-14, due to faster increase of immediate and consumer goods. Industrial production grew 6.7% y-o-y from 3.70% in Jan-14 and 1.7% in Dec-13, as manufacturing and electricity output pick-up, but offset partially by a drop in mining sector. #### Investment Outlook and Strategy

Malaysia's 2014 economy is expected to expand between 4.5% to 5.5% supported by improving exports amid moderation in domestic demand. Inflation rate is expected to trend higher from 2.0% -3.0% to 3.0%-4.0% due to potential new administered price adjustments while OPR is expected to increase by at least 25 bps in 2H2014 should the steady growth is intact.

In the local bond market, the movement in the bond yields will be determined by fresh economic data coming from local and external market environment, higher CPI expectation may also put upward pressure on bond yields. Upwardly movement will likely to be moderated by bargain hunters seeking for attractive levels that lure buying interest. Foreign holding of MGS is steady to circa 44.1% of

In view of the above, we are of the view that the market players will continue to take an overweight stance on corporate bonds vis-à-vis a more volatile government bond market, while tactically managing duration and pro-actively realigning the asset allocation in line with market movements.
