Initial Service Charge	Nil
Redemption Payment Period	Within 10 calendar days
Investment Manager	MIDF Amanah Asset Management Bhd

MANAGER'S COMMENTS

Review

Malaysian Government Securities ("MGS") closed mixed with long end traded higher due to unclear direction from local economic indicators. The 10-yr/3-yr and 10-yr/5-yr spread widened by 13 – 22 basis points ("bps"), to 98bps and 56bps from 76bps and 43bps respectively. On monthly basis, 7-, 10- and 15-yr closed higher at 4.10% (Dec2013: 3.97%), 4.23% (4.11%), 4.52% (4.48%), 4.58% (4.42%) whilst the 3-yr closed lower at 3.26% (3.325%) and 5-yr unchanged at 3.68%. Government Investment Issues ("GII") hovered around previous month's levels with the 3-, 5-, 7- and 10-yr closed lower at 3.38% (3.44%), 3.96% (3.96%), 4.13% (4.13%) and 4.32% (4.40%).

Investment Outlook & Strategy

Malaysia economy's outlook remained positive despite weak external demand and outflows of funds. Malaysia's GDP for Dec 2013 up 4.7% y-o-y, and is expected to expand 5.0-5.5% in 2014, backed by domestic demand and recovery in exports. Growth will be export driven as external conditions improved. Fiscal deficit is likely to fall to 3.5% of GDP for 2014 (est. 4% in 2013). Inflation rate in 2014 is estimated to trend higher.

Bond market is expected to experience price volatilities moving into 2014 amid illiquid trading activity and bearish prospects stem from US QE tapering. OPR will remain at 3.00% as further rate hike alongside cost-push inflation may derail growth momentum. However, Malaysia's debt high foreign ownership which corresponds to higher sensitivity in foreign exchange rates and start of QE tapering in January could dampen inflows into Malaysian capital market, causing near term MYR fluctuation. MGS' foreign holding as at Dec-13 unchanged at 45% after slight decline from 46% in Oct-13. Nevertheless, Malaysia's current foreign exchange reserves of USD136.3 billion are sufficient to cushion the impact of weakening MYR. Liquidation of MSG by foreigners could be offset by local buyers from pension funds, social security and insurance funds on structural demand.

Corporate bond issuance momentum will remain healthy as the current funding environment remains conducive despite yields aligning higher.

(1) MIDF Amanah Islamic Bond Fund has been converted to MIDF Amanah Shariah Money Market Fund on 1 January, 2011.

Investors are advised to read and understand the prospectus before investing. Among others, investors should consider the fees and charges. The price units and distributions payable, if any, may go down as well as up. Past performance of the fund should not be taken as indicative of its future performance. A copy of our Master Prospectus dated 1 March 2013 has been registered with the Securities Commission who takes no responsibility of its contents. The prospectus and application form can be obtained at our office. Units will only be issued upon receipt of an application form referred to in and accompanying the prospectus.

Corporate bond issuance in 2014 is estimated at RM50 – 60 billion, to be from the GLC, banks (Basel III-compliance capital), project financing (ETP and power project-related) and other conglomerates/corporates. Pricing in the primary market is expected to reflect the current sentiment as investors continue to seek for higher yields as compensation for duration. Hence, market players will likely to favour corporate bonds vis-à-vis a more volatile government bond market.

We remain overweight on corporate bonds while tactically managing duration and pro-actively realigning the asset allocation with market movements to optimize investment returns with vigilant credit selection at all times.
