Management Fee	1.5% p.a. of NAV
Trustee Fee	0.08% p.a. of NAV
Initial Service Charge	Up to 5.00% of NAV
Redemption Payment Period	Within 10 calendar days
Investment Manager	MIDF Amanah Asset Management Bhd

MANAGER'S COMMENTS

Review

February was a fairly quiet month for local markets due to the shortened trading month as a result of the festive holidays. Markets were in consolidation phase as the benchmark FBMKLCI traded in a narrow range throughout the month while the Ringgit and Crude oil prices trended sideways. The FBMKLCI ended the month 13pts or 0.8% lower to close at 1,654.75 while broader markets like the FBM Emas and FBM Small Cap Index both outperformed the benchmark ending the month down 0.6% and gaining 0.5% M-o-M respectively. Bucking the trend was the FBM ACE market that ended the month 3.64% lower at 5,702pts while average daily value traded on Bursa for the month of February fell 14% M-o-M to RM1.84bn as investors largely remained on the sidelines.

Investment Outlook & Strategy

We remain cautious and it is reflected in our short term investment strategy which remains unchanged, i.e we do recognize that a potential market run-up in the next few months is possible in view of the liquidity driven factors and evolving market developments. As such, our tactical stance is to lock-in profits early by end Q1 to early Q2 with Asset Allocation reducing towards Neutral (75% average) from an Overweight position. Any upside surprise in earnings due to the low-base effect, better than expected economic numbers, Sarawak Election, U.S. Presidential Election and positive global developments will augur well for markets. However, some downside risk may arise if investors' particularly foreigners lose confidence in the successor to the current outgoing BNM governor, Tan Sri Dato' Sri Dr. Zeti Akthar Aziz that's due in April 2016. The window of market opportunity remains very fluid and narrow. As such, we will continue to focus on leading indicators like market liquidity fund flows over pure economic fundamentals (lagging catalyst) as it is very crucial in the current times of uncertainties.

2016 will still be a stock specific, bottoms-up, trading market and will likely be a very challenging year. Nevertheless, we still believe that markets move in cycles and historically periods of downturn are always shorter than upturns. The market's fundamentals still offer opportunities at the right price as equities will still be the relatively better asset class to invest in compared to fixed income on the back of flush liquidity and an eventual rising rate environment globally moving forward.

- (1) Based on the fund's portfolio returns as at 15 February 2016, the volatility Factor (VF) for this fund is 20.16 and is classified as "very high" (source:Lipper).
- (2) Volatility Factor (VF) is subjected to monthly changes and Volatility Class (VC) will be revised every six months.
- (3) The portfolio composition may change overtime, therefore there is no guarantee that the VF and VC to remain constant.

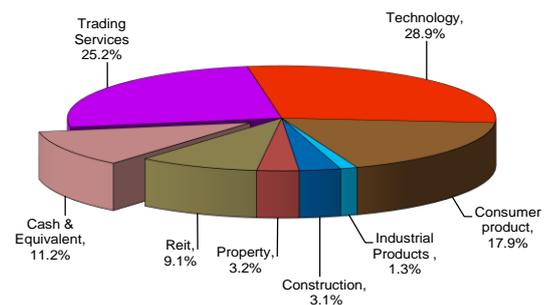

Investors are advised to read and understand the prospectus before investing. Among others, investors should consider the fees and charges. The price units and distributions payable, if any, may go down as well as up. Past performance of the fund should not be taken as indicative of its future performance. Investment in the funds are subjected to market risk, stock specific risk and liquidity risk. A copy of our Master Prospectus dated 1 March 2015 has been registered with the Securities Commission who takes no responsibility of its contents. The prospectus and application form can be obtained at our office. Units will only be issued upon receipt of an application form referred to in and accompanying the prospectus.

Therefore, the long term investment strategy should reflect such conditions rather than allow our short-term sentiments and emotions to over-shadow the logical thought process. As a result of this, reinvestment, rebalancing and/or switching activities will focus towards; (a) specific small to mid-caps for growth outperformance while timely selective big-cap index-linked stocks for indexation & dividend yield play, (b) under-valued companies with cheap valuations against its historical band/peers, (c) good companies which are currently at the wrong market cycle but will benefit moving forward due to its inflection point of structural or induced recovery, and (d) tactical positioning in specific thematic plays, other than the selective defensive-resilient led stocks.

LARGEST HOLDINGS (as at February 29, 2016)
