MANAGER'S COMMENTS

Review

In October, the KLCI fell below the 1,800pt psychological support level for the second time this year but managed to recoup all of its losses and change. For the month, the KLCI ended marginally higher or up 8.8pts or 0.5% to close at 1,855pts. The broader market performed worse, with the FBM Emas falling 0.3% mom to 12,882.89pts. Small caps were hurt badly as investors fled riskier stocks, resulting in the FBM Small cap index plunging 5.2% to 17,695pts while the FBM ACE declined 9.5% to 6,586pts. Average daily value traded on Bursa in Oct decreased 1.9% mom to RM2.10bn (RM2.14bn previously).

Investment Outlook & Strategy

Window of clarity for the market for now only extends up to Q1 2015 as the GST implementation in April will most likely put a cap on corporate earnings potentials / increase uncertainties and in turn cause a more cautious and softer market sentiment / scenario. As such, current Investment Strategy is to front-load and lock-in profits early before end March 2015 pending current chains of events and how the global economic situation and events may unfold moving forward into 2015. On a medium to long term basis, we still believe that the market's fundamentals still remains sound and intact as the overall global economic and capital market conditions/outlook now continue to improve albeit at a different beat and momentum. In addition, equity will still be a relatively better asset class to invest in compared to fixed income on the back of flush liquidity and eventual rising rate environment. This is so if compared to last 12-18 months ago as the central bankers / policy makers are better prepared with anti-recessionary policies in place.

At this current juncture, it is only prudent to remain invested after top slicing profits and switching into stocks and sectors with strong fundamentals for 2015 and beyond. As a result of this, reinvestment, rebalancing and/or switching activities will focus towards; (a) specific stocks for growth outperformance & dividend yield play, (b) undervalued companies with cheap valuations against its historical band/peers, (c) good companies which are currently at the wrong market cycle but will benefit moving forward due to its inflection point of structural or induced recovery, and (d) tactical position in specific thematic plays, other than selective defensive-resilient led stocks.

LARGEST HOLDINGS (as at October 31, 2014)
